Abandonment Procedures for On-site Septic Systems

1. Have an approved hauler pump the liquid, sludge and scum from all tanks in the system.
2. Remove the tanks or crush them in place if concrete.
3. Backfill the excavation to natural grade and establish a vegetative cover.
4. Disconnect power at the source to all electrical controls and remove all controls and panels.
5. Remove all parts of the drain field that are above ground such as valves, boxes and risers.
6. Coat all surface areas exposed to effluent with hydrated lime and establish a vegetative cover.
7. Wait at least 18 months before using the disposal area for gardening or construction.

Although no specific rules govern the abandonment of subsurface wastewater systems, these recommendations will ensure that sites formerly used for subsurface treatment and disposal are safe. They should be included in any sewer use ordinance when public wastewater service will be extended to facilities with existing on-site wastewater systems.
